Elizabeth Nesta Marks Collection

Size	70 boxes, 2 parcels
Contents	Correspondence, diaries, subject files, photographs, drawings, notebooks and scientific records related to entomology and environmental issues.
Date range	1890 to 1991
Biography	<p>Dr Elizabeth Nesta Marks, (usually known as Pat) was an eminent Queensland entomologist whose breakthrough work with mosquitoes and malaria in 1940s and 1950s was world-recognised. Dr Marks was appointed a Graduate Research Assistant to the newly formed Mosquito Control Committee (MCC) at the University of Queensland in 1943. During the War, Dr Marks uncovered the breeding behaviour of many mosquitoes, including the <i>Aedes culiciformis</i> using specimens from Cape York. Dr Marks produced more than 100 papers describing 38 species of new mosquito species together with new species of other insects including fruit flies, bugs, cockroaches and ticks. Her major publications include the <i>Atlas of Common Queensland Mosquitoes</i> (1966) and the 12 volume set <i>The Culicidae of Australasia</i> (1980 – 1989). After the MCC closed, Dr Marks moved to the Queensland Institute of Medical Research where she was appointed as Principal Entomologist. She officially retired in 1983 but remained on at the Institute to continue her work. She was also actively involved in local Queensland history which lead her to become a notable figure at Brisbane History Group seminars and functions and an active member of the Samford District Historical Museum Society.</p>
Notes	<p>Open access</p> <p>The collection was rehoused in 2013 and folders were moved from Boxes 68 and 69 to Box 72. See notes in the listing below for details.</p>
